

Skin Disease Treatment Guidelines (2026) & Dermatology in Karnataka

1. General Treatment Guidelines (2026)

Skin disease treatment follows a structured approach involving diagnosis, classification, and step-wise therapy. Treatment begins with topical medications and progresses to systemic or advanced therapies if needed. Long-term diseases require maintenance care and patient education.

- 1 Diagnosis using clinical examination and lab tests
- 2 Topical treatment as first line
- 3 Systemic therapy for moderate to severe cases
- 4 Avoid misuse of steroids
- 5 Regular follow-up for chronic conditions

2. Common Skin Diseases & Treatments

Acne

Acne is treated with topical retinoids and benzoyl peroxide for mild cases. Moderate cases require oral antibiotics, while severe acne may need isotretinoin under supervision.

Eczema

Eczema treatment includes moisturizers, short-term steroid creams, and antihistamines. Avoiding allergens is essential.

Psoriasis

Psoriasis is managed with topical agents, phototherapy, and systemic drugs. Advanced cases may use biologics.

Fungal Infections

Common in India, fungal infections require antifungal creams or oral medication. Steroid misuse should be avoided.

Urticaria

Treated with antihistamines. Chronic cases may require advanced therapy like biologics.

Vitiligo

Treatment includes topical agents, phototherapy, and surgical options in advanced cases.

3. Doctor Specialties

- 1 Dermatologist – treats skin, hair, nails
- 2 Venereologist – treats sexually transmitted diseases
- 3 Leprologist – specializes in leprosy
